

REMEDIAL BRANCH INPUT FOR SAM'S EOY

PERFORMANCE ASSESSMENT

- Region 6 completed the cleanup of five (5) NPL sites, including: AT&SF (Albuquerque) (NM), Gulfco Marine (TX), Hudson Refinery (OK), North Cavalcade Street (TX), and Old ESCO (TX).
- The work at these sites will result in protecting over 14,200 people.
- The remedial action resulted in approximately 141,500 cubic yards of contaminated soils and source materials being cleaned up.
- In addition to the cleanup activities, seven sites (15,285 acres) were made available for SWRAU, contributing 11% of the SWRAU national commitment. Longhorn AAP accounted for approximately 15,000 acres.
- Tar Creek: Since Jan 2011, over 1,177,000 tons of waste has been removed and placed at an on-site repository, freeing up a number of acres for property owners to eventually use as farm land and grazing pastures. Through my continued outreach efforts, and the MOU, EPA has facilitated the sale of over 95,900 tons of marketable chat, which has been hauled to the processors. This effort will also contribute to the increase usage of land that previously could not be used for many years.

BUSINESS ACUMEN

- Identified and reclassified \$6.3 million in removal funds that were used to complete a soil removal action at the Old ESCO Superfund site. This action resulted in completing the cleanup at the site.
